

Introducing Equus: Including Horses in Human Health & Education *with* Leif Hallberg

Don't miss this very special professional development opportunity to learn from leading expert and internationally-acclaimed author, educator, and psychotherapist, Leif Hallberg, how horses and the natural environment can be included in human healthcare and education as a powerful intervention.

What to Expect:

- 3 days with 15+ hours of continuing education filled with **hands-on learning** and **personal experiences with horses**, each other, and the natural world all in the context of professional development! *Who could ask for more?*
- This workshop combines professional development with personal awareness - offering opportunities to practice “humanship” and “horsemanship” skills simultaneous.
- There will be time for focused discussion, individual reflection, and group process.
- Come prepared to be engaged, challenged, and delighted, all while spending time outdoors in nature with horses.

Who Should Attend:

- Any healthcare professional or educator interested in this emerging specialization.
- No horse experience is necessary.

You Will Experience:

- How the innate human connection to animals and natural world is clinically beneficial or helpful in an education setting, and how to craft strategies for including nature-rich experiences.
- How interactions with horses hone “humanship” skills – or the ability to be more present, aware, thoughtful, authentic, and connective.
- How to differentiate (in theory and in practice) between the different interventions that include horses, what clients or students are appropriate for which intervention, and how to recognize safe and ethical equine-assisted programs.
- And much more!

Sept. 27th-29th, 2019 Banyandah Naturally, NSW
